

## FireBoard Display Issue

Written by Administrator

---

The FireBoard component has display issues if default template is not used. If, let's say, choose a grey default template, the icon images are not available, hence displaying the "X" and messed up the whole layout. The solution is to copy the default/images/english/ folder to default\_grey/images/english. Then all the icon images are available and the messed-up display of the forum is fixed.
